

FlexPAC III

Triple 17.3" HD displays in a high performance, rugged portable setup. Designed as a flexible-use unit with 7x full-length expansion slots configurable for the most demanding applications.

HD Triple Displays

The FlexPAC III provides triple displays at full HD for a combined resolution of 5760 x 1080. This combined resolution is typically ideal for digital media applications, geospatial analysis, or computer-aided design. While the FlexPAC III is very large (or wide) because of how it employs 3 displays, it can also be folded up when not in use to become a very compact unit. You simply deploy it and open it during hours of operation.

Additional Displays

3 displays is enough for most applications. However, some require more. With the FlexPAC II, you can actually attach our very own BCCD on top to have 6 or even 9 displays!

Intelligence Carry-On Program (ICOP)

The FlexPAC III is used as a portable, ruggedized workstation that opens to provide an integrated 3-D picture of the battlespace across three monitors. This is otherwise known as Intelligence Carry-On Program (ICOP). It includes easy-to-use applications, local shared storage and enterprise access to support near-real-time decision making.
